

Milestone Description

The milestone for this project will be to get the CLI showing the current floor, available floors, destination floor, what mode the elevator is acting in, the state of the doors (open/closed), and the direction of movement. Getting the buttons (up, down, emergency, maintenance, call, open door, close door) connected to the board will also be part of the milestone.

The elevator simulation will not work at this point, but the framework will be in place.
